

Session II: Educating Future Generations on Energy and Environment

Educating Future Generations

- Our responsibility:
 - Educate future leaders to understand and contribute to solving some of the world's most challenging problems
 - air quality
 - clean water
 - renewable and environmentally benign energy sources
 - climate change

Educating Future Generations

- Complexity of the challenges requires:
 - Many disciplinary perspectives
 - *Science, engineering, medicine, public health, social work, economics, political science,...*
 - International perspectives, knowledge, and cooperation

Educating Future Generations

- Opportunities:
 - Innovative educational programs
 - Campus sustainability programs
 - Environment and Public Health
 - Renewable Energy
 - Technology for International Social and Economic Development
 - International education partnerships
 - Student and faculty exchanges
 - Educational materials might be shared
 - Courses and curricula might be jointly taught
 - A digital library might serve all partners
